

The teaching crew— Ask the expert

By: Technical Skills Development Team

Learn Oracle from Oracle experts

This is a unique program designed to boost employees' learning and skills by connecting with Oracle's in-house experts. Engage in tailored, interactive sessions where our specialists share their deep knowledge and expertise.

Speakers-virtual profile

- **Aditya.Pinjala**
- Lead Data Analyst, Oracle

Experience

Oracle: 11 years

Expertise

11 years in architecting and delivering Data Analytics and Data Visualizations across multiple cloud platforms

Location

Bengaluru, KA

Overview of Transition to Data Analyst Data scientist and SQL for Data Analytics

The teaching crew – Ask the expert

- How to Transition to Data Analyst /Data Scientist ?
- Career Transition Roadmap
- Core Skill Areas
- Advanced Topics
- Tool Setup & Environment
- SQL for Data Analytics

Objective:

How to Transition to Data Analyst /Data Scientist ?

- Understand the transition pathway from business roles to data analytics and data science.
- Explore essential tools, skills, and techniques for corporate data-driven decision making.
- Learn SQL fundamentals for practical data analysis.

Career Transition Roadmap

1. Build Strong Foundations – Excel, SQL, and Data Handling
2. Learn Programming – Python for Data Analysis
3. Develop ETL and Data Engineering Awareness
4. Gain Expertise in Visualization – Power BI / Tableau
5. Explore Statistics and Machine Learning
6. Advance to GenAI and LLM-driven Analytics

Core Skill Areas

- Excel & Advanced Concepts
- SQL Concepts & Data Querying
- ETL Concepts & Data Pipelines
- Version Control (Git)
- Python for Data Analysis
- Visualization Tools: Power BI or Tableau
- Agile Methodology & Collaboration

Advanced Topics

- Databricks and Cloud Platforms
- Statistics for Data Science
- Machine Learning & Deep Learning
- Natural Language Processing (NLP)
- Generative AI, LLMs, and Agentic AI

Tool Setup & Environment

- SQL Server Management Studio Installation
- MySQL Installation
- Anaconda Setup for Python Environment
- Power BI Installation
- Git & Version Control Setup

SQL for Data Analysis – Key Concepts

- SELECT, WHERE, IN, BETWEEN, LIKE, CASE WHEN
- Aggregation: MIN, MAX, AVG, SUM, COUNT, COUNT DISTINCT
- GROUP BY, HAVING, JOINS (INNER, LEFT, RIGHT, FULL)
- UNION, MINUS, SUBQUERIES, TYPECAST
- Ranking Functions: RANK, DENSE_RANK, LEAD, LAG

Practice and Next Steps

- Work with real-world datasets for SQL queries and Python analysis.
- Build small analytics projects combining data cleaning, visualization, and insights.
- Explore cloud-based data platforms (Oracle Cloud, AWS, Azure).
- Continue learning advanced ML and AI techniques.
- Stay current with evolving data technologies.

Next ?

- Let's Start Work with the dataset
